ALL TYPES OF FILES

Prot-On allows you to protect files in any format, MS-Office, PDF, AutoCAD, image, video, audio, text (emails, blogs, social networks...)

FROM ANY DEVICE

Prot-On is available for Desktop: Windows, Mac, Tablets and Cellphones: Android, iOS, Blackberry

COMPATIBLE WITH PUBLIC AND PRIVATE CLOUD SERVICES

Prot-On is compatible with cloud storage services such as Dropbox, Box, Google Drive, ownCloud and SharePoint

FOR ALL USERS

Prot-On is free for home users and offers advanced functionality at very affordable prices to professionals, corporations, government agencies and other organizations

Control the access and use of your files no matter where they are

Protect your file

All copies of the document will be protected with strong encryption regardless of where they are stored

Prot-On is an application that protects your files and allows you to share them through any channel: by email, cloud storage, USB... They will only be accessed by authorized users.

Access Control

Every time users try to open the protected document Prot-On will check if they are authorized to do so and what type of access permission they have been granted (read, print, edit...)

Allows you to define and track who can or cannot read, print, edit, copy and manage them. You can assign or remove permissions at any time and with just once click, even after you've distributed the files.

Track file use

At any time you can check the activity log to see who has been accessing any copy of your file

Why use Prot-On?

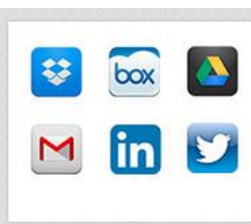

Prot-On is the best tool to keep control of the files that you have shared. Even after they have been shared through any channel, you can still hold control and be the owner of the file. You can block access or change the user permissions remotely.

Prevent information leaks

Protect your Intellectual Property

Use the cloud in a secure way

Access anywhere, anytime
